

INFORMATION TECHNOLOGY

Whether your organization is seeking help with a specific Information Technology challenge or a comprehensive business approach to IT management, we can tailor a program to meet your needs. Our Information Technology team has extensive experience providing technical, application, and process solutions to clients across a wide variety of industries. This experience allows us to arrive at answers sooner and consequently more cost-effectively. With your business and culture in mind, we take a no-time-wasted approach to understanding your challenges and crafting strategic solutions to meet your current and future operational objectives in the following areas:

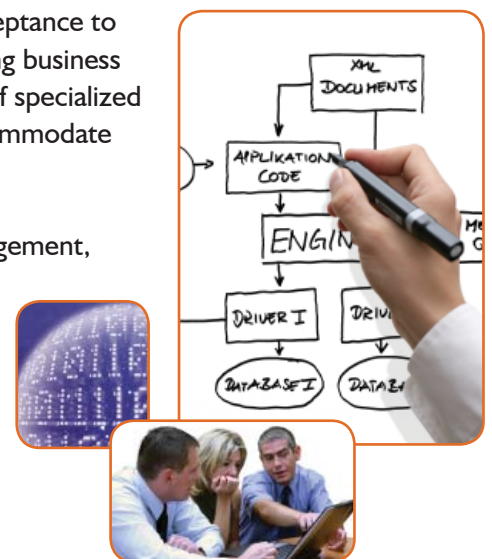

- Business Continuity Planning
- Enterprise Security
- Electronic Data Discovery (EDD)
- Data Forensics
- Infrastructure
- Voice over IP (VoIP)

BUSINESS CONTINUITY PLANNING

Business Continuity Planning (BCP) prepares organizations for future incidents that could jeopardize their core mission and long term health. With today's business moving at the speed of light, business continuity planning is more important than ever. We can help your organization recover business operations under virtually any condition, comply with generally-accepted standards, and mitigate the impact of an interruption.

Our business continuity solutions begin with an analysis phase to help your organization understand its current risks and vulnerability, and prioritize mission-critical data to ensure its ongoing availability. Meeting the requirements identified through analysis, a business continuity solution offers cost-effective safeguards to mitigate and prevent risks. Solution implementation is followed by testing and organizational acceptance to ensure all requirements are being fully met. Finally, an ongoing business continuity maintenance program monitors the functionality of specialized technical deployments and feeds into further analysis to accommodate future needs.

From analysis and design, through implementation and management, a robust business continuity program can support your organization's needs, budgets, and best practices.

ENTERPRISE SECURITY

In an interconnected world, every aspect of your business is potentially vulnerable to security risk. In fact, the greater your organization's online presence, the greater your exposure to hackers, viruses, Trojan Horses, and other security threats. We offer a full range of services to help your business secure and optimize its IT systems and maintain compliance with ever-changing information security mandates. We provide security risk assessments, firewalls, antivirus systems, and backup services to build a mote around your digital domain and ensure a secure corporate environment.

ELECTRONIC DATA DISCOVERY (EDD)

In recent years, electronic data discovery has evolved from select use in huge, document-intensive cases to become a common practice that plays a part of many legal matters. We have the experience and technological tools for accessing emails, spreadsheets, CAD/CAM files, accounting databases, reports, and any other virtual, computer-based data. Our comprehensive EDD solution includes data gathering, media restoration,

data processing, online review, and document production and reporting. We can help your business cost-effectively navigate the sometimes daunting world of electronic data discovery to convert your computer files or your clients' computer files into tangible documents you can search, view, and efficiently manage.

DATA FORENSICS

Our Certified Computer Examiner (CCE[®]) professionals can help Harris Beach clients recover crucial hidden or deleted files germane to a case through a verified process that ensures this discovered evidence is admissible in a court. While electronic data discovery involves collecting large amounts of electronic records, data forensics is the process of extracting specific pieces of digital information with surgical precision. A single hidden document or deleted email recovered through data forensics could prove to be the digital evidence that accelerates a favorable settlement or even wins a case. With over 90% of all commercial documents produced and stored on computer systems, and 90% of U.S. corporations engaged in some type of litigation, data forensics has become a legal necessity.

INFRASTRUCTURE

Maximizing the efficiency of enterprise data transport systems increases performance, productivity, and competitiveness. By understanding your business needs and existing and emerging best-in-class technologies, we can customize solutions for virtually any enterprise environment. Our enterprise infrastructure services include consulting, project management, implementation, and procurement. We can implement robust storage networks, high-speed redundant computer systems, and solid and secure enterprise-class IT networks compliant with regulatory and industry standards. We also back up all of our IT solutions with a responsive service team of senior IT professionals committed to supporting your organization's operational needs.

VOICE OVER IP (VoIP)

VoIP is gaining traction among businesses as a cost-effective alternative to traditional telephone networks. By understanding the bigger picture of enterprise infrastructure and security, we can provide an ROI/cost analysis to determine the potential benefit of VoIP for your organization.

HB SOLUTIONS LLC was established to provide non-legal services to clients. HB Solutions is a consulting affiliate of the HARRIS BEACH PLLC law firm. Founded in 1856, Harris Beach is one of the largest law firms in New York state and works with *Fortune 500* corporations, privately-held companies, emerging technology businesses, not-for-profit organizations, educational institutions, municipalities, and individuals.
